ACKNOWLEDGEMENTS

The author wishes to express his most sincere gratitude to his supervisors Dr. José A. Torres-Ruíz (Ponce School of Medicine) and Dr. Moïse Bendayan (Université de Montréal) for their excellent guidance, assistance and understanding; and for the professional and scientific environment they provided which made the completion of this task possible.

The author must also express his gratitude to the late Dr. Walter Stiehl and Dr. Calixto Soto whom in life gave me their advice. To Dr. Juan B. Fernández my friend for his encouragement, advice and spiritual support during my studies.

Special recognition goes to the people at the Université de Montréal in Canada. Particularly, I am grateful to Dr. Ariel E. Arias for his advice and friendship during my work at that institution; also to Dr. Irene Londono, Dr. Frederick W. Kan, Gaetan Mayer, Jean Godbout, Michael Lauzon, Pin Cheng for their encouragement and assistance. Photographs and slides included in this thesis were prepared by Jean Léveillé for which I am grateful. In addition I express my gratitude to Dr. R. Calvert (Université Sherbrooke, Sherbrooke, Canada) for providing the pancreatic juice.

This work was supported by grants SO6 GM-8239 MBRS program from the National Institute of Health to Dr. José A. Torres-Ruíz and by grant MT-7284 from the Medical Research Council of Canada to Dr. Moïse Bendayan.
The author would like to thank a special person for his help because when I needed it, he helped me immensely, I am referring to Dr. Luis F. Sala, President and Dean of Ponce School of Medicine.

Special thanks goes to the people at the Grants Management Office, Lourdes, Claris and Edid, for their friendship and invaluable help in transcribing the manuscript.

Finally, the most special acknowledgment goes to my dear wife Lourdes M. Léon-Bauzá for her technical assistance, patience and understanding during all this work; also to my family for their spiritual and material support.
