

Outreach Activities (Fall semester 2022 and Spring semester 2023)

Spring semester 2023 (High school students from the south of Puerto Rico were invited to this event)

High School students participated in the program's mini-symposium "STARS in STEM" and three materials science hands-on workshops were offered: mini-bots, lava lamp and fake stained glass.

90 high school students visited the Ponce Campus to know more about the RISE in STEM program and the research projects that have been developed by students enrolled in general Chemistry. Previous participants explained their research projects.
